Mac keyboard shortcuts

Historically, Macintosh computers use special symbols for certain keys, including Alt, Shift, Control, and Command keys. This guide uses these symbols as follows:

Shift . . .		Control . . .	
Alt . . .		Command . . .	
Function . . .		Mouse Click . . .	

Mac computers have a special preference for function keys in System preferences. This guide assumes your Mac is set at the default, with **Use all F1, F2, etc. keys as standard function keys unchecked**. In this state, you generally have to use the function key (Fn) when using function keys (F1, F2, etc.)

Disclaimer

These shortcuts were tested with Excel 2010 for Windows, and Excel 2011 for Macintosh. Many shortcuts should work with earlier versions of Excel, but not all. Shortcuts often do not work on a particular computer because other programs, or the operating system itself, has reserved some key combinations for another purpose.
